

Linfeng Pan

7+ Years in Frontend Development | B.Eng. Software Engineering |
linfeng.pan3@gmail.com | +86 15094041848 | 31

Education

Period	Institution	Degree
2014 – 2019	Northwest A&F University	B.Eng. Software Engineering

Quick Facts

Location	Xi'an, China
Languages	English — professional working proficiency (collaborated full-time with Australian & Indian teams at Thoughtworks)
Availability	Available immediately (departed Thoughtworks Sep 2025)

Professional Summary

Full-stack frontend engineer with **7+ years of development experience**, specializing in multi-platform application delivery across Web, WeChat Mini Program, Douyin (TikTok) Mini Program, and H5 hybrid development. Full-stack capabilities with React, Next.js, Node.js/Express, Drizzle ORM, and Docker. Delivered production-grade systems for global clients including **REA Group** (Australia's largest real estate platform) and **Porsche** (nationwide dealer network in China).

Cross-Platform Architecture & Componentization: Led the development of a cross-platform UI component library (Taro + Lerna Monorepo) shared across WeChat Mini Program, Douyin Mini Program, Web Admin, and H5 — four platforms. Led the migration of Porsche's WeChat Mini Program to Douyin Mini Program, achieving ~70% code reuse by resolving Taro API compatibility issues and rewriting animation modules.

AI-Enhanced Engineering: Deeply integrated AI tools (Claude Code, Cursor) into daily development workflows through Vibecoding practices. At REA Group, designed and implemented custom Agent Skills on top of Claude Code, building an AI-assisted development pipeline covering the full delivery cycle: Requirement Breakdown → Frontend Development → Automated Unit Testing → Autonomous Commit → Automated Code Review → Personal Review — significantly improving team delivery velocity and code quality.

Engineering Culture: Collaborated full-time in English with distributed teams across Australia and India at Thoughtworks. Championed Code Review practices, ESLint standards, and TDD adoption, measurably improving team code quality.

Core Skills

Category	Technologies
Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend Frameworks	React, Next.js, Redux Toolkit, React Router, MobX
Cross-Platform	TaroJS, WeChat Mini Program (Native), Douyin Mini Program, H5
Backend	Node.js, Express, RESTful API
Database & ORM	MySQL, PostgreSQL, MongoDB, Drizzle ORM
DevOps	Docker, CI/CD (GitHub Actions), Nginx
Testing	Jest, React Testing Library, Enzyme, Supertest
Build & Tooling	Webpack 5, Vite, Lerna, Yarn Workspace (Monorepo), Git
AI-Assisted Development	Claude Code, Cursor — Agent Skill encapsulation, Spec-driven development, Vibecoding workflows

Professional Experience

Thoughtworks | Frontend Engineer | Jan 2021 – Sep 2025

Porsche Dealer System (2021 – 2024) — Frontend Lead

Core business system developed for Porsche's nationwide dealer network in China, spanning four platforms: WeChat Mini Program, Douyin Mini Program, Web Admin, and H5. Features include intelligent vehicle recommendation, new car catalog, dealership management, and sales modules. Team size: 100+.

Tech Stack: React, TypeScript, Redux Toolkit, TaroJS, WeChat Mini Program, Douyin Mini Program, H5, Tencent Cloud Video

- Served as Frontend Lead responsible for feature delivery across all four platforms. Drove frontend engineering excellence — established ESLint standards, Code Review processes, and TDD practices, creating a frontend quality baseline for the team
 - Led the **WeChat → Douyin Mini Program migration**: tackled Taro API runtime compatibility gaps and animation performance degradation on Douyin. Researched alternative API approaches and rewrote the animation module, achieving ~70% code reuse and establishing a repeatable cross-platform migration blueprint
 - Led the **cross-platform component library** initiative (Taro + Lerna/Yarn Workspace Monorepo), delivering 15+ reusable business components (vehicle cards, dealer selectors, unified form components, etc.) shared across all four platforms, eliminating redundant UI development
-

REA Group (2024 – 2025) — Full-Stack Engineer

Maintained and developed features for Australia's largest real estate platforms (realcommercial.com.au / realestate.com.au), serving millions of users. Collaborated full-time in English with distributed teams across Australia and India.

Tech Stack: React, TypeScript, Next.js, Node.js, Express, Jest, Supertest, Claude Code

- Developed frontend features (React + TypeScript + Next.js) and maintained Node.js/Express backend services. Backend development followed Domain-Driven Design (DDD); API testing used Supertest
- Used Claude Code daily in a Vibecoding workflow — integrating AI across the full development lifecycle (requirements analysis, implementation, testing, and code review), going far beyond basic code completion
- Designed and built custom Agent Skills on Claude Code, standardizing the development workflow:

Skill	Function
Spec Skill	Decomposes requirements into structured, executable specification documents
Unit Test Skill	Auto-generates Jest test cases covering core logic and edge cases
Issue Skill	Publishes structured issue reports with root cause analysis and remediation docs
Code Review Skill	Pre-commit automated review to ensure code meets quality standards

Requirement Breakdown → Frontend Dev → Unit Testing → Issue Reporting → Code Review → CI/CD Deployment

- Rapidly diagnosed and resolved production incidents, ensuring core business continuity. Maintained cross-team code health monitoring mechanisms

Additional Projects

Rental Management System — Mini Program + Web (React + Jest + React Testing Library)

- Built the Mini Program and Web projects from scratch; responsible for frontend architecture decisions. Wrote unit and integration tests to safeguard core business flows

KPI Dashboard / Contract Management System (React + ECharts)

- Developed data visualization dashboards replacing manual Excel-based reporting. Refactored legacy frontend code, significantly improving maintainability

Xi'an Feifeng Technology | Frontend Engineer | Oct 2019 – Jan 2021

Rural Revitalization — Public Sanitation IoT Management System

IoT sensors installed in rural public restrooms enabled real-time occupancy monitoring. The WeChat Mini Program helped government workers identify facilities needing cleaning and navigate dynamic route plans. The Web Admin dashboard provided GPS vehicle tracking and data visualization.

Tech Stack: Native WeChat Mini Program, IoT sensor integration, GPS tracking, route planning, ECharts

- Sole frontend developer — independently owned the full lifecycle from requirements gathering through deployment
 - Integrated IoT sensor data streams to deliver real-time facility status display and dynamic route planning algorithms
 - Implemented real-time vehicle GPS tracking with turn-by-turn navigation. Built the core map pages for the Admin Web dashboard
 - Independently developed the internal management system frontend (React + Spring Boot + MongoDB)
-

Changjiang Electronics Co., Ltd. | Frontend Engineer | Jul 2019 – Sep 2019

- Talent reserve / onboarding program
